Lee Norton, Asst. Bureau Chief
Brian Martin, Asst. Bureau Chief
Bureau of Research**

REPORT OVERVIEW

This report presents a detailed summary of the Ohio Adult Parole Authority (APA) active supervision population as of July 1, 2003. The report contains descriptive information on basic demographics, offense and supervision characteristics cross-tabulated by gender. It also includes detailed breakdowns of release type and supervision unit location. The report highlights important changes in the supervision population since 1998.

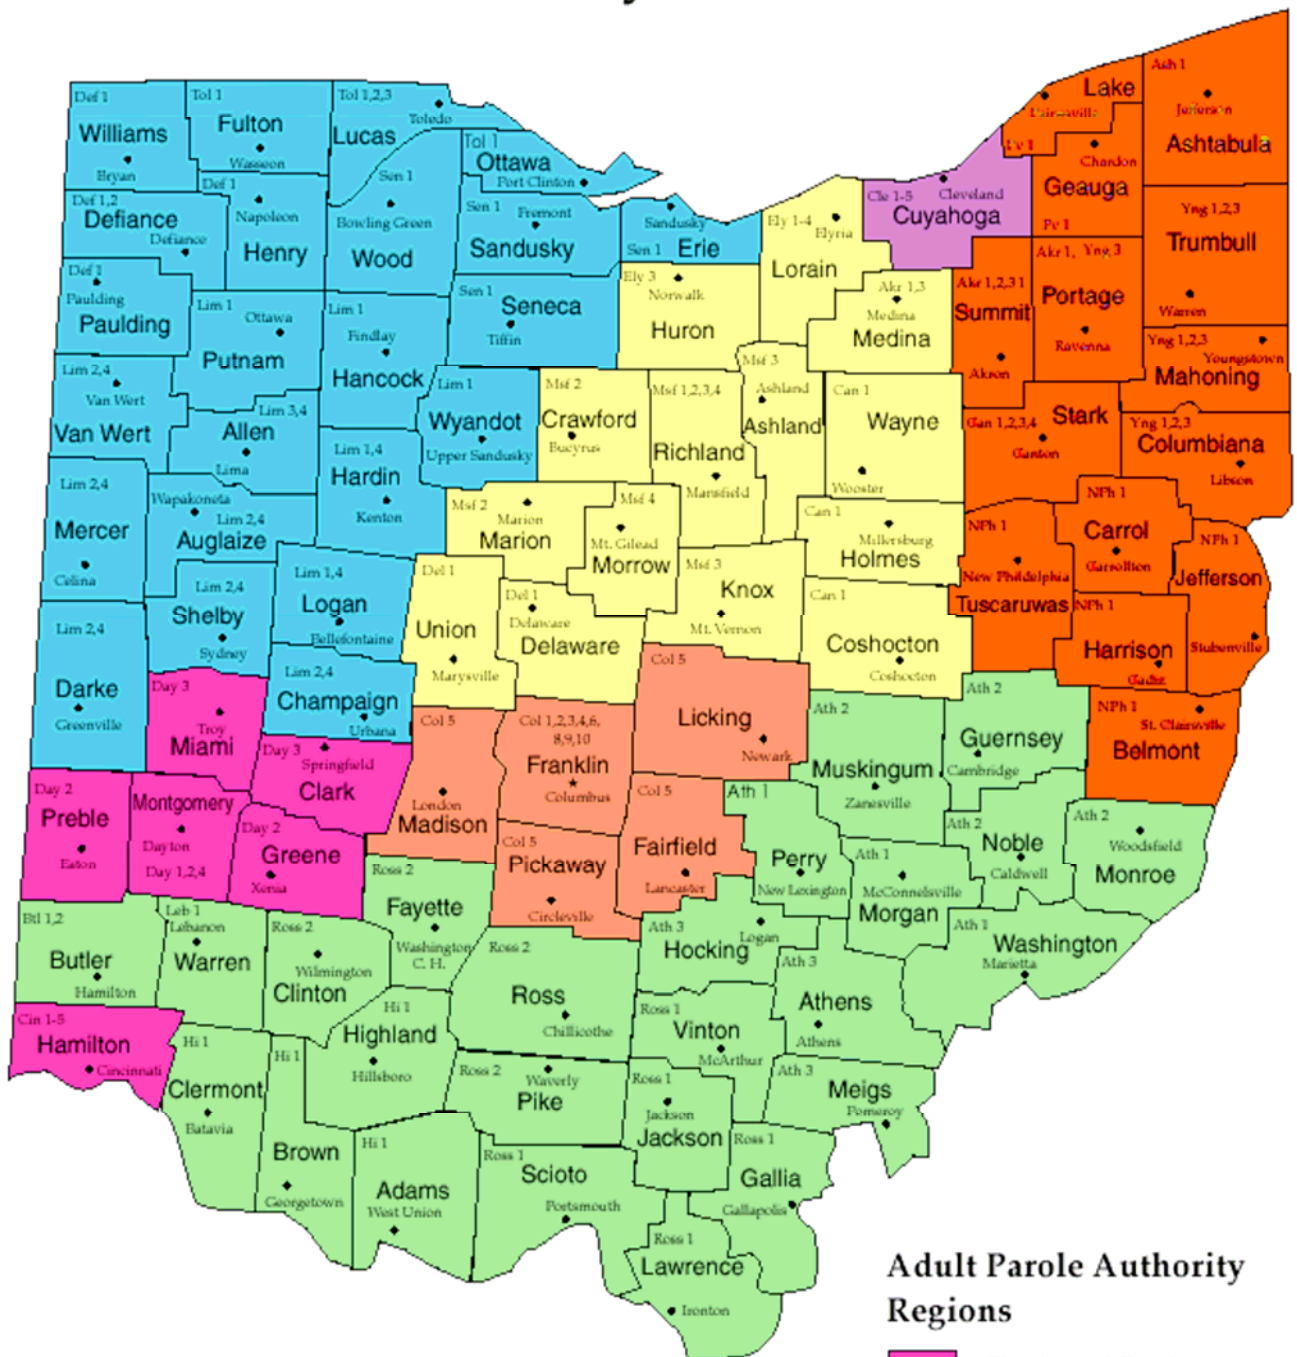

Data source

The data contained in this report are from a downloaded extract of the Community Correction Information System (CCIS). The actual date of file generation was July 26, 2003; thus, the reported population count of 31,806 corresponds most closely to the month-end supervision totals reported in the July 2003 Agency Report. The supervision population described in this report was captured by selecting from the downloaded CCIS file those cases flagged as active on that date, excluding cases designated as pending. This includes outgoing interstate compact cases considered active under CCIS business rules. It also includes a smaller number of inactive county probation/community control cases not yet formally designated as closed in CCIS. These two categories of offenders were not included in the total supervision counts reported in the last APA Census of January 1, 1998, which relied instead on compiled responses from a statewide mail survey of parole officers. Although the populations are not precisely comparable, the 1998 census is used as a baseline point in describing some of the most important compositional changes since the implementation of Senate Bill 2.

Organization of Report

The report presents summary data on sex, age, race, offense type, release type, supervision level, region/unit location, and county of commitment. Tables are organized into two major sections. The first three tables present aggregate data on all supervision units, summarizing the population by sex, age, race, offense, release type, and supervision level (Table 1) and then cross-tabulating release type with all other characteristics (Tables 2 and 3). In the next section, these same characteristics are described separately by region and unit location as of July 2003 (Tables 4 through 9). Throughout the detailed unit tables, the outgoing compact and inactive county cases are collapsed into a single category labeled as "Other", as per the reporting structure of the monthly Agency Report. In the first three tables, those cases are not separately summarized. Next, Table 10 shows the rate at which supervised offenders reside in their original county of commitment. Finally, the last table (Table 11) compares 1998 and 2003 census findings. The major findings of the census are presented in summary format below.

Ohio Counties and County Seats

- Adult Parole Authority Regions**
- Cincinnati Region
 - Cleveland Region
 - Columbus Region
 - Chillicothe Region
 - Akron Region
 - Lima Region
 - Mansfield Region

SUMMARY OF MAJOR FINDINGS

Major Characteristics of Total Supervision Population (Table 1)

- The total supervision population numbered 31,806. The 4,623 females under supervision constituted 14.5 % of the total population.
- The youngest offender was age 18 and the eldest was 86, giving a range of 68 years. Their average age was 32 and the median age was 31. Roughly one-fourth (27%) of the supervision population were between the ages of 18 and 24, while approximately the same percentage (26%) were 40 or older.
- Overall, three-fifths (61%) of the supervision population were white and two-fifths (39%) were nonwhite. Women under supervision were more likely to be white than were the men.
- One-third (32%) of the supervision population had committed a crime against a person (excluding sex offenses) as the most serious commitment offense. If sex offenses are counted, nearly half (45%) of the supervision population had a crime against a person as the most serious commitment offense.
- Post-Release Control (PRC) is now the modal form of supervision; one-third (33%) of those under supervision were on PRC, while nearly one-third (30%) were on Community Control. Just under one-fifth (18%) were on Parole.
- The most serious offense type patterns were significantly different for males and females. Whereas one-half (49%) of the males under supervision had committed a crime against a person (including sex offenses), only about one-fourth (23%) of the females had committed a crime against a person (including sex offenses) as their most serious commitment offense. This figure for females was roughly matched by 26% with a property offense and 23% with a drug offense as their most serious commitment offense.
- The distributions of release types were strikingly different between males and females, with more than half of all female supervisees under Community Control. Three-fifths (60%) of the males were on Parole or another post-prison type of release, while two-thirds (67%) of the females were on a probationary type of release. The top three release types for males were Post-Release Control (36%), Community Control (26%) and Parole (21%). In contrast, the top three release types for females were Community Control (53%), Post-Release Control (19%), and Compact Probation (10%).

- More than two-fifths (44%) of the population were on a Basic Medium level of supervision. About one-fifth each of the population were on Basic Low (23%) or Basic High (21%) supervision. Although the proportion of males (44%) and females (42%) on Basic Medium supervision were about the same, the proportion of females on Basic Low supervision (42%) was much higher than that for males (20%), and the proportion of males on Basic High supervision (24%) was much higher than that for females (6%). Only a small portion of both the males and females were on Intensive supervision.

Distribution of Supervision Population: Release Type by Sex, Race, & Age (Table 2)

- In reviewing the distribution of “sex by release type”, it is evident that the further the stage into the penalty system, the greater the proportion of males, and conversely, the smaller the proportion of females. The Treatment in Lieu release type had the largest proportion of females (39.2%) followed by Community Control (25.8%), Compact Probation (23.1), Probation (21.9%), Judicial Release (16.3%), and Transitional Control (15.7%). Post-Release Control (8.0%) and Parole (3.9%) had only small proportions of females.
- Release type Parole had the largest proportion of nonwhites (59.5%) followed by Transitional Control (50.9%), Post-Release Control (47.1%), Compact Parole (44.7%), Shock Probation (29.3%), Compact Probation (28.6%), Probation (26.8%), and Community Control (23.5%). Treatment in Lieu accounted for only 13.5 % of nonwhites. In reviewing these findings, it should be noted that the Adult Parole Authority does not supervise Community Control offenders in any of Ohio’s largest cities.
- Release type Judicial Release had the largest proportion of supervisees age 24 and under (37.7%), followed by Community Control (34.2%), Treatment in Lieu (33.0%), Post-Release Control (31.8%), Compact Probation (29.6%), and Probation (29.4%). Only 2.2% of the parolees were age 24 and under. Generally, pre-prison penalties had younger offenders.
- Supervisees on Parole were older, with a median age of 38, and conversely, Judicial Release and Post-Release Control were comprised of younger offenders with median ages of 27 and 29, respectively. The median age of Probation and Community Control was 30.

Distribution of Supervision Population: Release Type by Offense Type and Supervision Level (Table 3)

- Almost one-half (47.6%) of those released on Community Control were supervised for property or drug offenses.
- Nearly three-fifths (58.3%) of those released on Post-Release Control were supervised for crimes against persons or sex offenses.
- Over two-thirds (67.3%) of those released on Parole were supervised for crimes against persons or sex offenses.
- Three-tenths (29.6%) of those on Probation were supervised for property offenses; one-fifth (26.5%) were on Probation for crimes against persons or a sex offense.
- Three-tenths of those who received either Compact Parole (29.5%) or Compact Probation (29.1%) were supervised for drug offenses; compact parolees had a larger proportion of crimes against persons or sex offenses compared to compact probationers.
- Nearly three-quarters (72.7%) of those released for Treatment in Lieu were drug crime offenders.
- Of those on Transitional Control, 31.3 % were supervised for crimes against persons (no sex offenses) and 26.5% for drug offenses.
- Nearly one-half (46.1%) of those released on Community Control were supervised at the Basic Medium supervision level; one-third (33.7%) were at the Basic Low level.
- Almost one-half (47.9%) of those on Parole were supervised at the Basic Medium supervision level; nearly one-third (31.4%) were at the Basic High level.
- Almost one-half (42.7%) of those on Post-Release Control were supervised at the Basic Medium level; nearly one-third (30.2%) were at Basic High.
- Most supervisees on Compact Parole (83.7 %) and Compact Probation (89.1%) were supervised at Basic Medium or Basic Low.

Distribution of Original County of Commitment by Number of Commitments Residing in Same County as of July 1, 2003 (Table 10)

Table 10 warrants some explanation. To prepare the table, first, the out-of-state offenders were eliminated because they don't fit in this analysis. The in-state offenders in the APA supervision population were sorted into their current county of residence. Then the offenders in each county were studied. How many of them were convicted in the county in which they now live? That percentage is reported in the table in the far right column titled "rate."

- Only 62.9 % of the in-state offenders under supervision on July 1, 2003, were living in the same county from which they were sentenced. Generally, the more rural regions and counties were below the statewide rate. Chillicothe, Lima, and Mansfield regions had 50.4%, 57.3%, and 57.9%, respectively, of the offenders living in the same county in which they were convicted. The lowest county statewide was Wood County, with a rate of 14.5 %.
- Urban counties have rates higher than the statewide rate. Cuyahoga County/Region had the highest rate at 82.5%.
- This topic needs much further study. Two possible explanations are noted below. The observed patterns may suggest that some offenders relocate out of rural counties into big cities after being convicted. A very different alternative explanation would be that some offenders travel to counties in which they do not reside to commit crime, and after conviction for the crime are then supervised in the county in which they originally resided.
- Readers who want to learn more about trends in this pattern should consult the 1998 APA census. The 1998 census reported the statewide rate was about 70%, which is larger than the 2003 rate of 63% (The 1998 data on this subject is not reported in this summary. Contact the Bureau of Research for the 1998 APA census).

Comparison of 1998 and 2003 Census Findings (Table 11)

- The total supervision population increased 78% from 17, 904 in 1998 to 31,806 in 2003.
- There was a slight dip in the percentage of the supervision population who were female from 19% to 14% and, correspondingly, a small rise for males from 81% to 85% of the population in 2003.
- The percentage of nonwhites rose marginally, from 37% in 1998 to 39% in 2003.
- There have been significant increases in percentages of violent and sex offenders under supervision between 1998 and 2003; Crimes against persons offenders (excluding sex offenses) rose from 22% to 32% of the population, and sex offenders from 5% to 13%; Crimes against persons *including* sex offenses rose from 27% in 1998 to 45% in 2003.
- There have been significant decreases in percentages of drug and property offenders under supervision between 1998 and 2003; Drug related crimes dipped from 24% to 18% of the population, and property offenses from 23% to 13%.
- Probation significantly fell from 42% of the population in 1998 to 2% of the population in 2003. Parole also experienced a decline from 24% to 18%. (Probation and Parole were used for crimes before July 1, 1996, when Senate Bill 2 went into effect.) Conversely, Post-Release Control (PRC) and Community Control represented significantly larger proportions of the population in 2003; PRC significantly increased from 7% to 33% and Community Control rose from 9% to 30% in 2003.
- The use of Intensive supervision fell from 10% to 4% of the population in 2003. The proportions for other supervision levels were generally consistent from 1998 to 2003.
