Bureau of Research**

SYNOPSIS

This report provides a detailed description of the Ohio Adult Parole Authority (APA) active supervision population as of July 1, 2006. The report contains descriptive data for offense and supervision variations cross-tabulated by offender's sex, race and age. Also, it contains cross tabulations of APA region & unit locale by offense and supervision types. This is the sixth installment in a series of APA censuses since 1996. Go to www.drc.state.oh.us/web/research2.htm to access past census reports.

During FY06 the total population under supervision declined for the first time since 2003 (see Table 11). After increases of 8% during FY04 and 2% during FY05, the total supervision population declined by 5% during FY06. The most significant reason for the decline was a legal ruling in Ohio that halted the growth of the Post Release Control (PRC) population. In early 2006 the Ohio Supreme Court, in the Hernandez v. Kelly decision, determined the APA may not impose PRC supervision upon an offender following incarceration for a Senate Bill 2 offense unless the sentencing entity makes the proper reference to PRC. The reference is required even when the sentencing court addresses the matter in the sentencing hearing. The APA reviewed journal entries of all offenders under discretionary as well as mandatory PRC (ORC 2967.28) and terminated supervision if notice of PRC was insufficient.

Whereas the Parole population continued to decline sharply in FY06, with 1,271 fewer offenders after a decline of 898 offenders in FY05, the PRC population only increased by 134 offenders in FY06 compared to an increase of 1,420 offenders in FY05. Without a significant increase in the PRC population in FY06 to balance out the sharp decline in the Parole population, the result was a net loss of more than 1,000 offenders on supervision. The other significant decline in FY06 was a loss of over 500 offenders in the Community Control population. Regardless of these changes in population size, the gender and race breakdowns have remained relatively consistent from 2003-2006 at approximately 86% male and 14% female, and 61% white and 39% non-white. The mean age of the total population under supervision increased to 34 in 2006, up one year from the mean age in 2005. The size of the population aged 45 and older remained unchanged during FY06, while the size of the population under the age of 45 declined by 5%.

The number of offenders under supervision during FY06 declined for all offense types except firearm offenses, which grew by 18%, and miscellaneous offenses, which went up 5%. The number of sex offenders under supervision dropped by 9%, property offenders by 7% and drug offenders by 6%. With regard to release type, one change to note is that the offenders in the Intensive Program Prison (IPP) group have now been split out from the PRC group in the reporting of APA population statistics. The IPP group has existed since the early 1990s, but since their numbers have been rising, the APA decided to move them into their own category beginning in 2006 to keep better track of them. Lower level offenders (i.e. non-violent F3, F4 and F5) are given an opportunity to shorten their prison time by participating in the IPP program at the institution. Many of these offenders would not receive PRC due to their offense level; however, since they opt to engage in the program they are required to be supervised for PRC as a discretionary case. This means that they are eligible for early termination if they are doing well after 90 days.

With respect to supervision level, there was a change in supervision policy in February 2006, consolidating most basic high, basic medium and basic low cases into a single Basic level. As a result, the number of offenders under the basic medium level of supervision grew by more than 6,000 (40%) during FY06 to comprise two-thirds (66%) of the total supervision population. The number of offenders under the basic high and basic low levels of supervision each dropped by two-thirds during FY06, while those under intensive, residential and monitored supervision grew by 64%, 48% and 38% respectively. Basic high and Basic low cases should disappear over the next year.

Data source

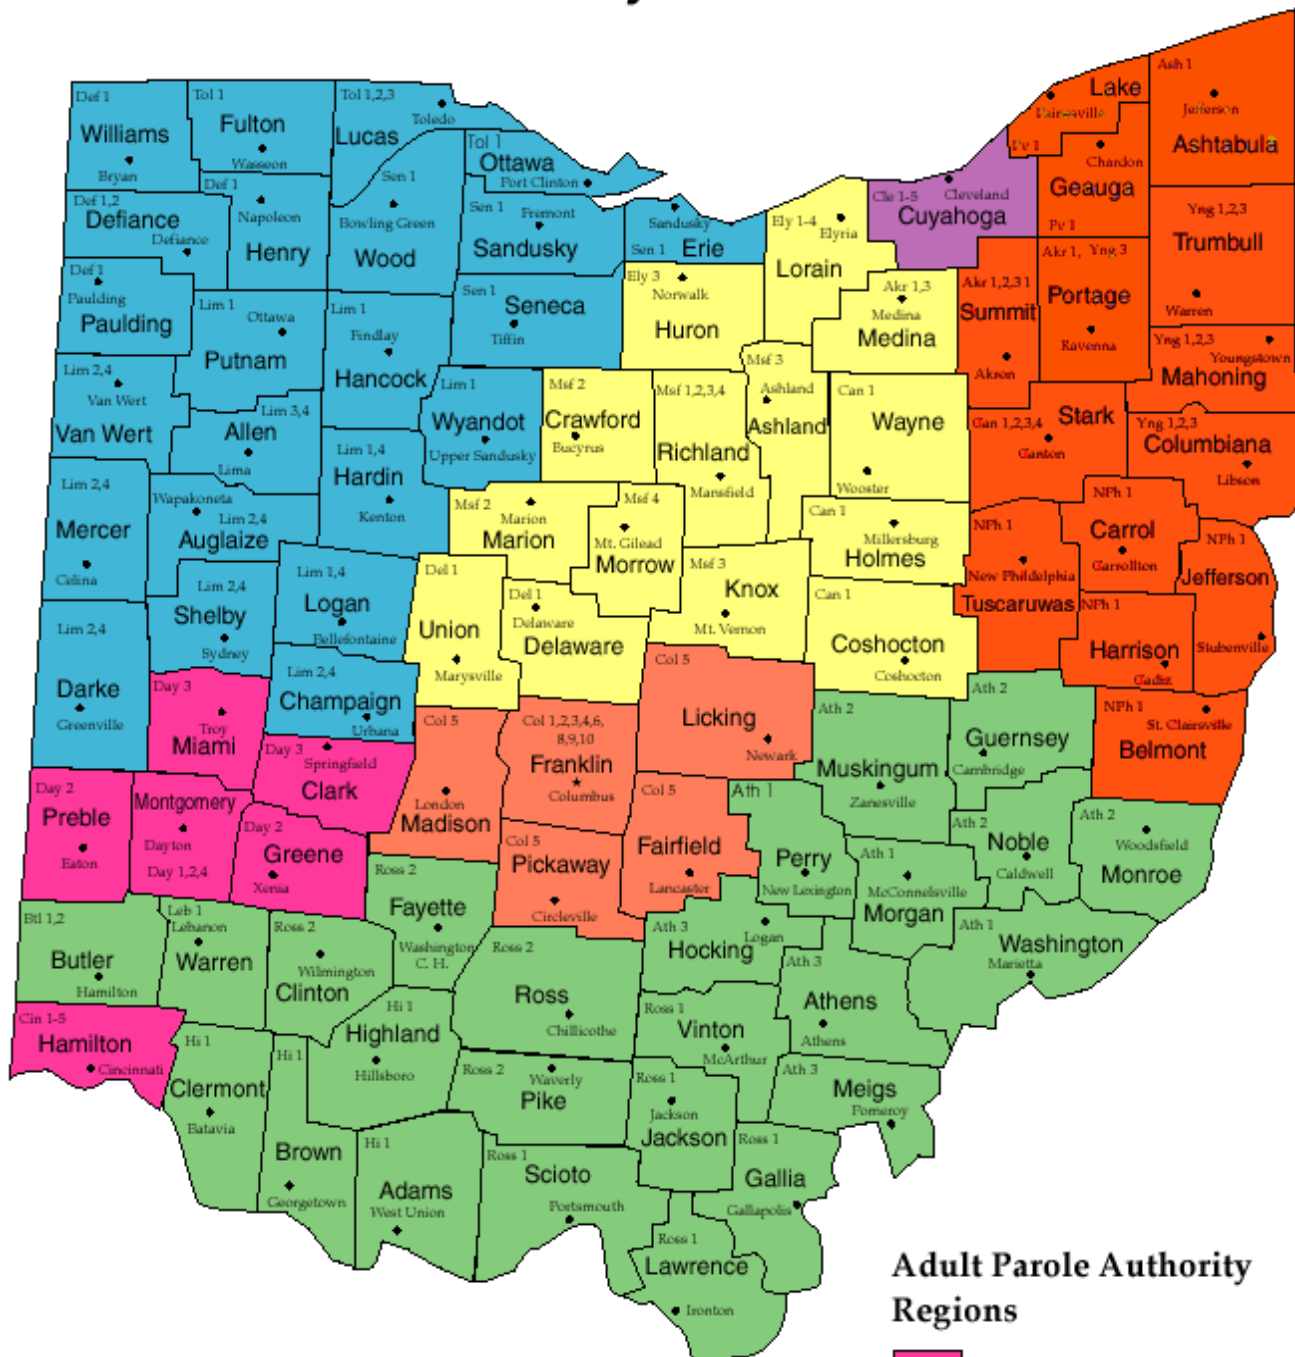

The data contained in this report were downloaded from an extract of the Community Correction Information System (CCIS). The reported population count of 33,437 coincides closely with the month-end total of 33,410 cases reported in the June 2006 APA Agency Report. The supervision population described in the report is a “snapshot” of the cases flagged as active on July 1, 2006, excluding cases designated as pending. Those flagged active cases include outgoing interstate compact cases deemed active under CCIS business rules. It also includes a smaller number of inactive county probation and community control cases not yet formally designated as closed in CCIS.

Organization of the Report

The report presents summary data on sex, age, race, offense type, supervision type, supervision level, APA region & unit locale, and sentencing county. Tables 1-3 provide aggregate data for all APA supervision units combined. Table 1 summarizes age, race, offense, release type, and supervision level cross-tabulated by offender’s sex. Tables 2 and 3 cross-tabulate release type with sex, race, age, offense, and supervision level. In Tables 4-9, sex, race, age, offense, release type and supervision level are broken down by APA region & unit locale. Throughout the detailed region and unit tables, there is a category near the bottom of each table called “other”. This category includes outgoing interstate compact cases, inactive, detainer, county cases and the residential/halfway house cases.

It should be noted that in the last of these region and unit locale tables (Table 9), the “other” category does not include the residential/halfway house cases. Because Table 9 looks at the breakdown of supervision level by region and unit locale, and “residential” supervision is one of the supervision levels, we decided to include the residential category so that the reader can see how these cases are apportioned by region. Since all of these residential cases are under transitional control, we included the transitional control (TRC) category for each region following the listing of all of the units. Table 10 illustrates the rates at which supervised offenders reside in their sentencing counties for the parole and post-release control supervision subpopulations. Finally, table 11 provides a comparison of the 2003 through 2006 populations for the demographic, offense, and supervision variables. The key findings of the 2006 Ohio APA census are outlined below in the Executive Summary.

Ohio Counties and County Seats

Adult Parole Authority Regions

- Cincinnati Region
- Cleveland Region
- Columbus Region
- Chillicothe Region
- Akron Region
- Lima Region
- Mansfield Region

EXECUTIVE SUMMARY

- The total supervision population numbered 33,437. The 4,829 females under supervision constituted 14% of the total population.
- The youngest offender was age 17 and the eldest was 86, giving a range of 69 years. Their average age was 34 and the median age was 32. About one-fourth (24%) of the supervision population was aged 24 or under, while 29% were 40 or older.
- Overall, three-fifths (62%) of the supervision population was white and about two-fifths (38%) were nonwhite. Seven of every ten women under supervision were white, compared to six of every ten men.
- Nearly half (46%) of the supervision population had committed a crime against a person as the most serious commitment offense (31% non-sex offenses, and 15% sex offenses).
- Post-Release Control (PRC) is the modal form of supervision; over one-third (37%) of those under supervision were on PRC. Nearly three out of ten supervisees (29%) were on Community Control, while less than one in seven (14%) were on Parole, three percentage points less than last year.
- The most serious offense type patterns were significantly different for males and females. Whereas one-half (50%) of the males under supervision had committed a crime against a person (including sex offenses), less than one-fourth (23%) of the females had committed a crime against a person (including sex offenses) as their most serious commitment offense. This figure for females was roughly matched by 26% with a property offense and 24% with a drug offense as their most serious commitment offense.
- The distributions of release types were strikingly different between males and females, with half (50%) of all female supervisees under Community Control. Three-fifths (58%) of the males were on Post Release Control or Parole, while two-thirds (65%) of the females were on a probationary type of release. The top three release types for males were Post-Release Control (40%), Community Control (25%) and Parole (16%). In contrast, the top three release types for females were Community Control (50%), Post-Release Control (20%), and Compact Probation (10%).
- Two-thirds (66%) of the population was on Basic Medium (old level) or Basic (new level) supervision. The percentage of the population on each of the other types of supervision was under 10%. Although the proportion of males (65%) and females (69%) on Basic Medium supervision were comparable, the proportion of females on Basic Low supervision (14.6%) was twice that for males (6.8%), and the proportion of males on Basic High supervision (7.2%) and Intensive supervision (9.7%) were four

times that for females (1.8% on Basic High and 2.4% on Intensive). A 2005 change in the supervision level is sorting offenders into Basic and Intensive levels only.

- With respect to release type by sex, it is evident that the further the stage into the penalty system, the greater the proportion of males, and conversely, the smaller the proportion of females. Females comprised 36% of those released to Treatment in Lieu, 25% of those on Community Control, 23% each of those on Compact Probation and Probation, and 17% of those on Judicial Release. They made up only 10% of those on Transitional Control, 8% of those on Post-Release Control and 4% of those on Parole.
- There is a similar situation when looking at release type by race, in that the further the stage into the penalty system, the greater the proportion of nonwhites, and conversely, the smaller the proportion of whites. The release type with the highest proportion of nonwhites was Parole (59%), followed by Transitional Control (53%), Compact Parole (46%), Post-Release Control (45%), Shock Probation (39%), Compact Probation (28%), Probation and Community Control (with 23% each), Judicial Release (20%) and Treatment in Lieu (12%).
- Offenders on Parole had the highest average age (41) among the release types. More than half (55%) were age 40 or older, while less than one-tenth (9%) were under 30. By contrast, offenders on Post-Release Control had an average age of 32, with one-fourth (24%) aged 40 or older and half (49%) under 30.
- In general, offenders in pre-prison release groups (those on Community Control, Compact Probation, Probation or Treatment in Lieu) were younger than those in post-prison release groups. They had an average age of 32, with 26% aged 40 or older and almost half (47%) under 30. Offenders on Judicial Release were also younger, with a mean age of 32, only one-fifth (22%) aged 40 or older and half (50%) under 30.
- Three out of four in-state offenders (75%) under parole or post-release control supervision on July 1, 2006, were living in the same county from which they were sentenced. Generally, the more rural regions and counties were below the statewide rate. The Chillicothe and Mansfield regions, which are largely rural regions, had rates of 59% and 63% respectively. The county with the highest rate was Cuyahoga (92%). The county with the lowest rate was Pike (0%), where none of the five Parole/PRC offenders committed from the county were living there on July 1, 2006.

* Includes offenses against public peace, justice, and public administration; conspiracy, complicity and attempt.

** Offenders released to a halfway house under transitional control (TRC) release.

*** Prisoner has an approved placement but has not yet been released from incarceration. Upon release prisoner receives a supervision level; they are "pending" cases until that happens.

**** APA staffers no longer supervise Transitional Control (TRC) cases. The Bureau of Community Sanctions now contracts with and monitors state licensed community halfway houses that supervise TRC cases.

*****New release type that is a subgroup of the post-release control group
