SYNOPSIS

This report provides a detailed description of the Ohio Adult Parole Authority (APA) active supervision population as of July 1, 2005. The report contains descriptive data for offense and supervision variations cross-tabulated by offender's sex, race and age. Also, it contains cross tabulations of APA region & unit locale by offense and supervision types. This is the fifth APA census since 1996.

Go to www.drc.state.oh.us/web/research2.htm to access past census reports.

During FY05 the total population under supervision rose again, but at a slower rate (approximately 2%) than it did during FY04 (during which there was an increase of 8%) [See the comparison of the July 1 populations from 2003-2005 in Table 11]. The gender and race breakdowns of the population have remained relatively consistent across the 2003-2005 populations at approximately 86% male and 14% female, and 61% white and 39% non-white. The mean age of the total population under supervision increased from 32 in 2004 to 33 in 2005, fueled primarily by another increase (of 9%) among those aged 45 and older. This subpopulation grew by 20% during FY04.

With regard to offense type, the number of sex offenders under supervision grew another 11% during FY05. Coupled with the 23% growth in this offender subpopulation during FY04, the number of sex offenders under supervision grew by more than one-third (37%) during the past two years. Also during FY05, the parole subpopulation declined by 13% while the post-release control subpopulation increased by 13%, and offenders under the basic medium level of supervision swelled by more than 1,000 to comprise almost 45% of the total supervision population. Although comprising a much smaller percentage of the total supervision population, the number of offenders under monitored supervision grew by almost one-third (32%) during FY05.

Data source

The data contained in this report were downloaded from an extract of the Community Correction Information System (CCIS). The reported population count of 35,097 coincides closely with the month-end total of 35,070 cases reported in the June 2005 APA agency report. The supervision population described in the report is a "snapshot" of the cases flagged as active on July 1, 2005, excluding cases designated as pending. Those flagged active cases include outgoing interstate compact cases deemed active under CCIS business rules. It also includes a smaller number of inactive county probation and community control cases not yet formally designated as closed in CCIS.

Organization of Report

The report presents summary data on sex, age, race, offense type, supervision type, supervision level, APA region & unit locale, and sentencing county. Tables 1-3 provide aggregate data for all APA supervision units combined. Table 1 summarizes age, race, offense, release type, and supervision level cross-tabulated by offender's sex. It should

be noted that for the first time, beginning with this 2005 Census report, offenders released to a halfway house have been grouped together under a new supervision level called “residential”. All of these residential supervisees fall under the release type of transitional control (see the bottom half of Table 3). Tables 2 and 3 cross-tabulate release type with sex, race, age, offense, and supervision level. In Tables 4-9, sex, race, age, offense, release type and supervision level are broken down by APA region & unit locale. Throughout the detailed region and unit tables, there is a category near the bottom of each table called “other”. This category includes outgoing interstate compact cases, inactive, violators at large, detainer, county and residential/halfway house cases.

It should be noted that in the last of these region and unit locale tables (Table 9), the “other” category does not include the residential/halfway house cases. Because Table 9 looks at the breakdown of supervision level by region and unit locale, and “residential” supervision is one of the supervision levels, we decided to include the residential category so that the reader can see how these cases are apportioned by region. Since all of these residential cases are under transitional control, we included the transitional control (TRC) category for each region following the listing of all of the units. Table 10 illustrates the rates at which supervised offenders reside in their sentencing counties for the parole and post-release control supervision subpopulations. Finally, table 11 provides a comparison of the 2003, 2004 and 2005 populations for the demographic, offense, and supervision variables.

The key findings for the 2005 Ohio APA census are outlined below in the Executive Summary.

Ohio Counties and County Seats

REV. 10/00

EXECUTIVE SUMMARY

- The total supervision population numbered 35,097. The 4,991 females under supervision constituted 14% of the total population.
- The youngest offender was age 17 and the eldest was 86, giving a range of 69 years. Their average age was 33 and the median age was 32. About one-fourth (24%) of the supervision population was aged 24 or under, while 29% were 40 or older.
- Overall, three-fifths (61%) of the supervision population was white and about two-fifths (39%) were nonwhite. Seven of every ten women under supervision were white, compared to six of every ten men.
- Approximately one-third (31%) of the supervision population had committed a crime against a person (excluding sex offenses) as the most serious commitment offense. If sex offenses are counted, nearly half (47%) of the supervision population had a crime against a person as the most serious commitment offense.
- Post-Release Control (PRC) is the modal form of supervision; over one-third (36%) of those under supervision were on PRC. Nearly three out of ten supervisees (29%) were on Community Control, and less than one-fifth (17%) were on Parole, three percentage points less than last year.
- The most serious offense type patterns were significantly different for males and females. Whereas one-half (51%) of the males under supervision had committed a crime against a person (including sex offenses), less than one-fourth (22%) of the females had committed a crime against a person (including sex offenses) as their most serious commitment offense. This figure for females was roughly matched by 26% with a property offense and 24% with a drug offense as their most serious commitment offense.
- The distributions of release types were strikingly different between males and females, with more than half (52%) of all female supervisees under Community Control. Three-fifths (60%) of the males were on Parole or another post-prison type of release, while two-thirds (66%) of the females were on a probationary type of release. The top three release types for males were Post-Release Control (39%), Community Control (25%) and Parole (19%). In contrast, the top three release types for females were Community Control (52%), Post-Release Control (21%), and Compact Probation (10%).

- Close to half (45%) of the population was on Basic Medium supervision. About one-fifth each of the population was on Basic Low (22%) or Basic High (18%) supervision. Although the proportion of males (45%) and females (43%) on Basic Medium supervision were comparable, the proportion of females on Basic Low supervision (40%) was twice that for males (19%), and the proportion of males on Basic High supervision (20%) was four times that for females (5%).
- With respect to release type by sex, it is evident that the further the stage into the penalty system, the greater the proportion of males, and conversely, the smaller the proportion of females. Females comprised 32% of those released to Treatment in Lieu, 25% of those on Community Control, 23% of those on Compact Probation, 21% of those on Probation, and 17% of those on Judicial Release. They made up only 11% of those on Transitional Control, 8% of those on Post-Release Control and 4% of those on Parole.
- There is a similar situation when looking at release type by race, in that the further the stage into the penalty system, the greater the proportion of nonwhites, and conversely, the smaller the proportion of whites. The release type with the highest proportion of nonwhites was Parole (59%), followed by Transitional Control (52%), Post-Release Control and Compact Parole (with 46% each), Shock Probation (36%), Compact Probation (29%), Probation (24%), Community Control (23%), Judicial Release (19%) and Treatment in Lieu (10%).
- Those offenders on Parole had the highest average age (41) among the release types. Fifty-three percent of those on Parole were age 40 or older, while only 11% were under 30. By contrast, offenders on Post-Release Control had an average age of 32, with 22% aged 40 or older and half (50%) under 30.
- In general, pre-prison offenders (those on Community Control, Compact Probation, Probation or Treatment in Lieu) had younger offenders. Offenders of those release types had an average age of 32, with 25% aged 40 or older and almost half (47%) under 30. Offenders on Judicial Release were also younger, with a mean age of 31, only one-fifth (21%) aged 40 or older and half (49%) under 30.
- Three out of four in-state offenders (75%) under parole or post-release control supervision on July 1, 2005, were living in the same county from which they were sentenced. Generally, the more rural regions and counties were below the statewide rate. Chillicothe and Mansfield, largely rural regions, had rates of 58% and 63% respectively. The county with the highest rate was Cuyahoga (90%), while the county with the lowest rate was Pike (0%), where none of the six Parole/PRC offenders committed from the county were living there on July 1, 2005.

* Includes offenses against public peace, justice, and public administration; conspiracy, complicity and attempt.

** Offenders released to a halfway house under transitional control (TRC) release.

*** Prisoner has an approved placement but has not yet been released from incarceration. Upon release prisoner receives a supervision level; they are "pending" cases until that happens.

**** APA staffers no longer supervise Transitional Control (TRC) cases. The Bureau of Community Sanctions now contracts with and monitors state licensed community halfway houses that supervise TRC cases.
